

Table 14-6.05

Shifts of Laboratory Values During Treatment, Categorized Based on Threshold Ranges

		Placebo (N=86)		Xan. Low (N=84)		Xan. High (N=84)		p-value
Shift		Normal at	High at	Normal at	High at	Normal at	High at	
[1]		Baseline	Baseline	Baseline	Baseline	Baseline	Baseline	[2]
CHEMISTRY								

ALANINE AMINOTRANSFERASE	n	82	2	79	1	80	0	0.828
	Normal	80 (98%)	0	78 (99%)	0	78 (98%)	0	
	High	2 (2%)	2 (100%)	1 (1%)	1 (100%)	2 (2%)	0	
ALBUMIN	n	84	0	80	0	80	0	0.611
	Normal	84 (100%)	0	80 (100%)	0	80 (100%)	0	
	High	0	0	0	0	0	0	
ALKALINE PHOSPHATASE	n	82	2	79	0	79	1	0.770
	Normal	81 (99%)	0	78 (99%)	0	79 (100%)	0	
	High	1 (1%)	2 (100%)	1 (1%)	0	0	1 (100%)	
ASPARTATE AMINOTRANSFERASE	n	82	2	79	1	80	0	0.770
	Normal	79 (96%)	1 (50%)	77 (97%)	1 (100%)	78 (98%)	0	
	High	3 (4%)	1 (50%)	2 (3%)	0	2 (2%)	0	
BILIRUBIN	n	84	0	79	0	79	1	0.770
	Normal	83 (99%)	0	79 (100%)	0	77 (97%)	0	
	High	1 (1%)	0	0	0	2 (3%)	1 (100%)	
CALCIUM	n	84	0	80	0	80	0	

NOTES: Only subjects with baseline results are included in the summary.

There were no subjects with abnormal low values at baseline.

[1] A subject is counted only once for each analyte. A change will be considered shifting from normal at baseline to abnormal or from abnormal at baseline to normal at any visit during the treatment. The treatment period is defined as any planned visit after Week 0 (Visit 3), up to and including Week 24 (Visit 12).

[2] CMH test for general association, controlling for status at baseline.
